

Aflex Corroline+ hose provides solution for major alcohol company

- **Maltose and yeast transfer**
- **Reducing offloading time**

A renowned brewer was experiencing difficulties with the locally made PVC hoses on their production lines. The company used PVC hoses for tanker offloading duties and transfer applications of maltose and yeast in their production.

Aflex recommended that the customer switch to Corroline+ hoses due to their robust, heavy-duty properties and reduced offload times. As with any of our products, Aflex's PTFE liner is FDA approved and has a two-year guarantee.

Having experienced a good partnering relationship with Aflex, the brewery is considering a potential replacement of all their other tanker hoses for production

applications, including transferring the final product for bottling.
